Tree and Shrub Planting

Native Meadow Establishment

Start-to-Finish Project Support

OUR APPROACH

At Shenandoah Habitats we value a science-based approach, collaboration, excellent customer service, and efficiency when it comes to planning, executing, and maintaining projects for our clients. We bring decades of practical experience to each job, which means less mistakes and better success rates.

We believe our relationships and team members are at the heart of our success. Our project managers have been working in the conservation industry for decades with a deep knowledge of conservation, forestry, and habitat establishment. Our planting supervisors and crews have been working with us for over 15 years and know how to plant with the least amount of waste that have an eye for detail and pride themselves on fast and efficient installations.

NATIVE MEADOW ESTABLISHMENT

We partner with organizations and landowners to design, implement, and maintain native meadow habitat projects. Whether it's pollinator habitat or native warm-season grass meadows, our experience allows for site-specific management plans that blend practical experience, a focus on native species selection, and an enthusiasm for conservation practices.

The right equipment is key to a successful project, and with our specialized seed drill that's scaled for portability and maneuverability, we excel in small to mid-sizes projects.

Let our experienced staff help you create a meadow that meets your habitat goals.

TREE AND SHRUB PLANTING

TREE PLANTING

Our experienced project managers and planting crews have planted thousands of acres of hardwood and conifer trees over the past thirty years. Whether it's bareroot seedlings, tubelings, or container plants, our hand planting crews can handle the job.

LIVE STAKE INSTALLATION

Bring a high level of success to your stream and wetland restoration projects. With the specialized tools and techniques needed, our crews have had tremendous success installing live stakes in various sizes. Success with these types of plantings comes from knowing how to handle as well as install them correctly. We pride ourselves on bringing that success to every project.

TREE SHELTER DISTRIBUTION

We carry a full line of traditional and degradable tree shelters, shrub shelters, and oak stakes.

PROJECT SUPPORT

SITE PREPARATION AND POST-PLANTING MAINTENANCE

Our team is with you through each step of your project: from conception through installation and on-going maintenance. With our practical experience and science-based approach, we can help you avoid typical pitfalls. We offer project management, mowing, spot and strip spraying, stake maintenance, and bird net/tree shelter removal services.

INVASIVE SPECIES MANAGEMENT

Whether it is creating a comprehensive plan to your meet specific project goals, coordinating the large scale treatment of Elaeagnus, or using innovative chemistry to control Japanese Stilt Grass throughout a restored stream buffer, our team of experienced professionals bring the skills and expertise needed to get the task done in a timely and efficient manner.
